

# Cumulative stress exposure effects on Simpson diversity

Beta GLMM:  $\text{Simpson\_Genus\_norm} \sim \text{HistoryLevelNum} + (1 \mid \text{Tank.ID})$ .

Predicted means with 95% CI.

Colored points: observed tank-level means (normalized 0–1), fill by number of prior stressors.

Black line: beta GLMM marginal means on the response scale (white underlay for contrast).

Grey ribbon: 95% CI (grey75).
