

Mortality by prior stressors: parasite vs unexposed

Predicted probabilities with 95% confidence intervals

Parasite challenge  Parasite-exposed (P+)  Unexposed (P-)

Tank-level observed points (jittered x); diamonds: marginal predicted means.
Model: $\text{cbind}(\text{dead}, \text{alive}) \sim \text{HistoryLevelNum} * \text{Parasite} + (1 | \text{Tank.ID})$.
